Summary

Fullstack developer with experience building web applications, data-driven systems, and automation tools. Skilled in Java, C#, JavaScript, and React, with a strong focus on problem solving, performance optimization, and clean code practices. Proven ability to design efficient solutions and deliver measurable improvements in performance and usability.

Education

BS Universidad Nacional de Ingeniería (UNI), Computer Systems Engineering Estelí, Nicaragua
• Selected to present 'CashCrafter', a financial automation tool, at the Scientific and Technological Journey (TIC Category). Feb 2022 – Dec 2026

Experience

Freelance / Personal Projects, Software Developer 2023 - Present

- Designed and developed multiple fullstack and backend applications focused on performance and scalability.
- Built systems for data processing, search optimization, and business automation across different domains.
- Applied best practices in API design, database optimization, and modular architecture.

Projects

Developer Portfolio Mar 2026

High-performance personal portfolio built with React and Vite, focused on scalability and optimized frontend architecture.

- Achieved a perfect Lighthouse score (100/100/100/100) across performance, accessibility, best practices, and SEO.
- Optimized asset loading and rendering performance using Vite and modern frontend techniques.

ChatVerde Estelí, Nicaragua
Nov 2025

Conversational search engine built in F# and .NET for querying a natural medicine product catalog.

- Engineered a weighted search algorithm with tokenization and stopwords removal, improving query precision by $\geq 10\%$.
- Optimized query execution to achieve ≤ 100 ms response times across datasets of up to 1,000 products.
- Implemented text normalization and intent recognition to handle spelling variations and category-level queries.

E-Commerce Web Application (Allegra) Estelí, Nicaragua
July 2025

Performance-optimized e-commerce platform built with React and Vite.

- Refactored a legacy frontend into a modular React architecture, improving page load performance by 60%.
- Integrated a multi-method checkout system with payment APIs and async validation, reducing user input errors.

Employee Productivity System

Backend-driven system for tracking employee performance metrics and KPIs.

- Designed a normalized relational database schema, reducing redundancy and improving query performance by 30%.
- Developed a full CRUD system enabling real-time KPI tracking for management.

Estelí, Nicaragua

June 2023

Interactive Business Directory

Search platform to digitize and centralize local business information.

- Built a searchable interface to improve business discoverability.
- Structured and optimized data for efficient querying and scalability.

Estelí, Nicaragua

June 2025

Skills

Programming Languages: Java, C#, JavaScript, SQL, F#

Backend: REST APIs, API Design, Authentication, CRUD Architecture

Frontend: React.js, Vite, Tailwind CSS, HTML5, CSS3

Databases: MySQL, Database Design, Query Optimization, Normalization

Performance: Performance Optimization, Algorithm Efficiency, Low-latency Systems

Tools & Platforms: Git, GitHub, .NET, VS Code

Languages: Spanish (Native), English (B2 - Professional Working Proficiency)

Certifications

AI Development: From 0 to Production

Mar 2026

- Completed training on practical AI application development and deployment fundamentals.
